REASONS FOR ALLOWANCE

2. The following is an examiner's statement of reasons for allowance: The prior art does not provide for, nor suggests providing for obtaining a buffer using various buffer allocation modes. The system determines a mode to obtain a buffer according to a parameter supplied to a receive operation call which indicates how to acquire a buffer, either from application-supplied storage owned by the sockets server application, or from system-supplied storage not owned from the server application. The acquisition of a buffer only occurs once client data has been received, and the buffer can be sized exactly to the size of the client data. The caller_supplied_dynamic buffering mode allows the application to supply a callback function 376 to be called by the OS in order to obtain a right sized buffer allocated from application owned memory 372. No pointer needs to be supplied on the receive operation. The system_supplied buffer mode parameter indicates that a system owned buffer should be acquired. The buffer is allocated from system owned memory or from a cache. The length field indicates the right size of the buffer. The system_supplied buffer mode provides correctly sized buffers based on the data request. For these reasons, in conjunction with the other limitations of the independent claims, puts this case in condition for allowance.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
